# Team Project

# Project Goal

---

Implement a web-based system based on the user stories your team collected in the Autumn semester.

Work in a team to implement, refactor, and test a software system.

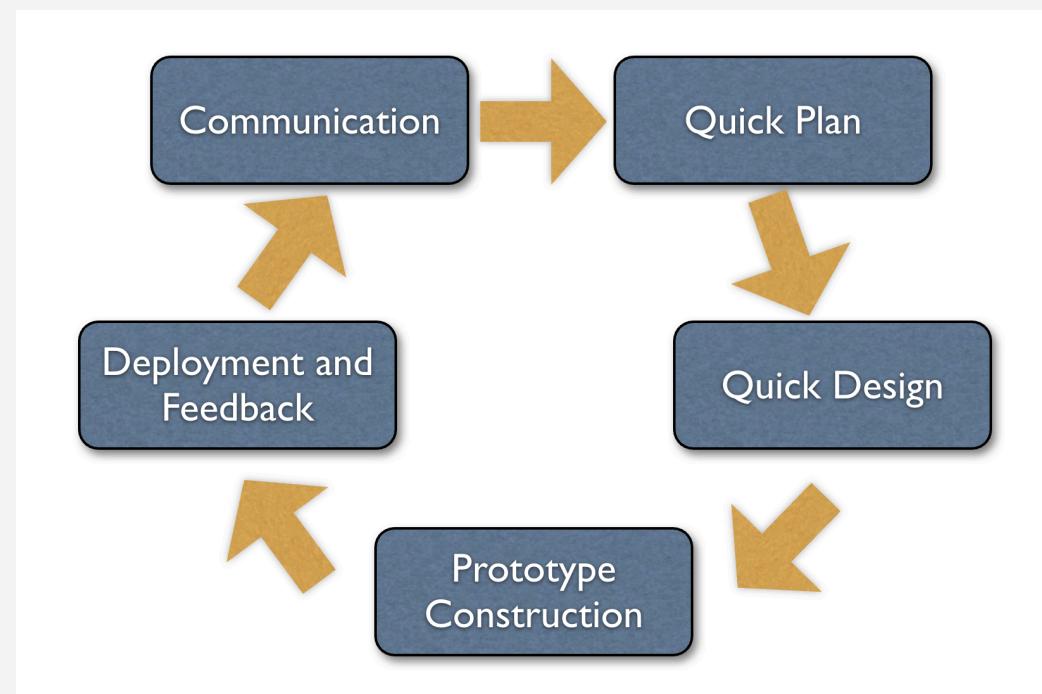

# Agile Development Process

Iterative & Incremental

Customer Collaboration

Adaptability

Teamwork & Communication

From Week 3 in Semester 1

# Scrum

---

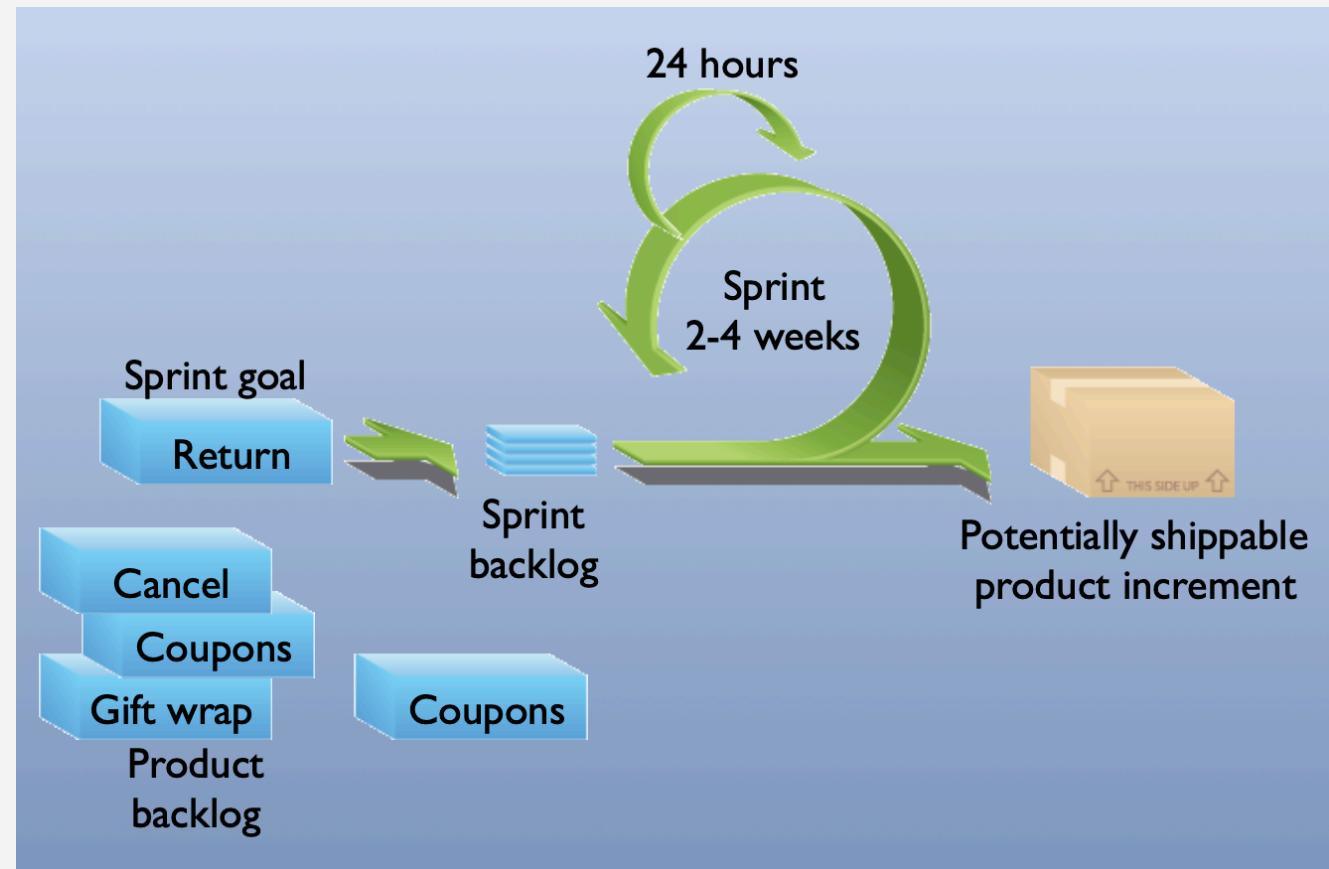

Autumn semester, Week 3

Part of Agile methodologies

Self-organising team of 5-9

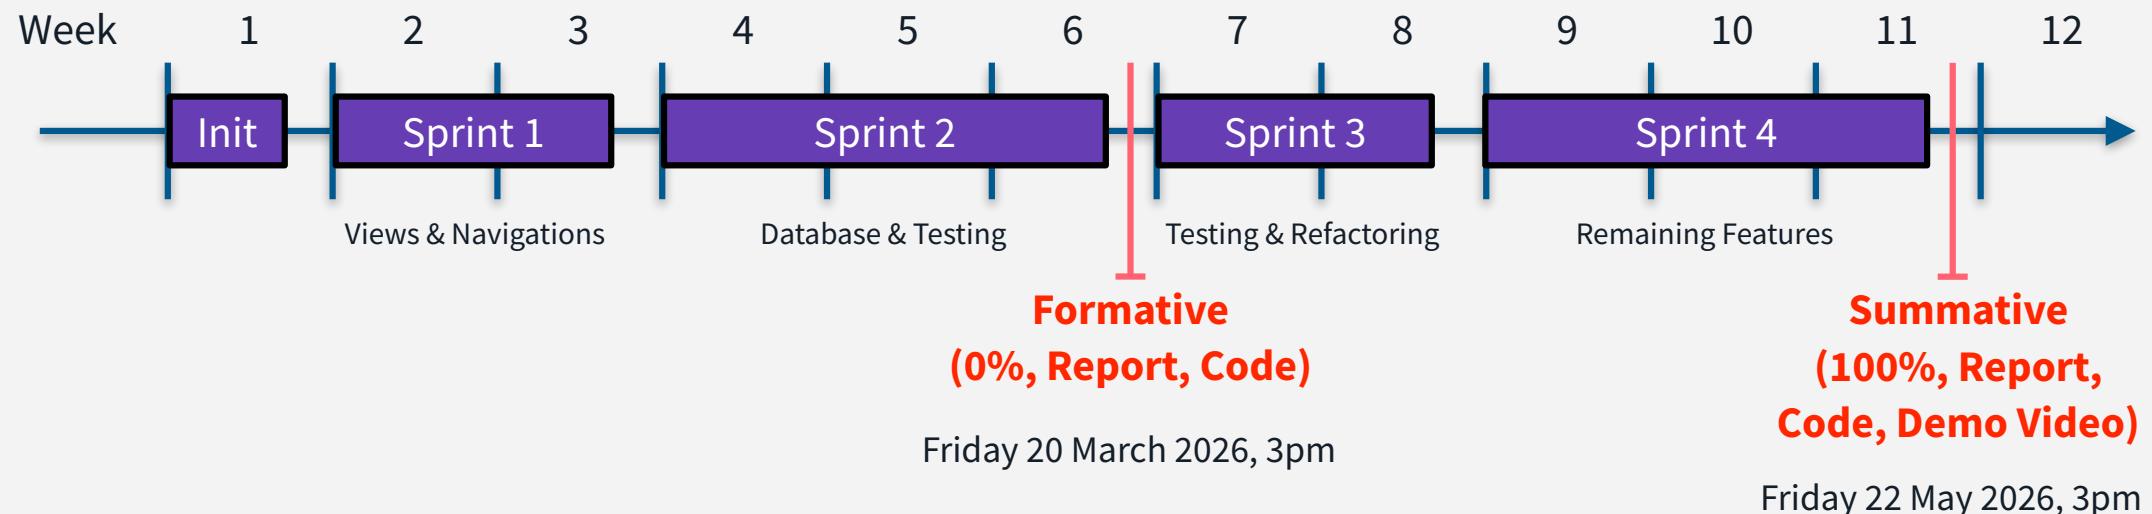

Product owner, scrum master, product backlog, sprints, burndown charts, daily scrum, etc.

**Essential** in the industry.

# Weekly Schedule based on mini-Scrum

---

After the final submission, students will do a **peer assessment** (BuddyCheck) for individual scaling.

# Key Points in mini-Scrum

---

## **Scrum master** (team lead)

- Lead scrum events (sprint planning, individual stand-ups, and sprint review).
- Help clear “blockers” to keep the team productive.
- No need to have the same lead throughout the semester.

## **Weekly Scrum**

- A weekly meeting is timetabled (Tuesdays), but your team may have more meetings regularly.
- Individual **stand-ups** (max 3 min each): Each team member must share what they did, what they will do, and any blockers they have.
- Do **not** interrupt the stand-ups; any blockers should be discussed **after** completing the stand-ups.

# GitLab Issues & Issue boards (subject to assessment)

The screenshot shows the left sidebar of the GitLab web interface. Under the 'Project' section, 'TestProject' is selected. Below it, 'Pinned' and 'Issues' (with a count of 3) are listed. The 'Issue boards' tab is currently active. In the main area, the title 'Donghwan Shin / TestProject / Issue Boards' is displayed above a search bar and a 'Scrum' button. Below the search bar are three columns: 'Open' (1 item), 'ToDo' (2 items), and 'Ongoing'. A red box highlights the 'ToDo' column.

The screenshot shows a detailed view of an issue titled 'Improve README'. The top right has 'Edit' and 'More' buttons. Below the title, it says 'Open' and 'Issue created 3 days ago by Donghwan Shin'. There are like and dislike buttons with counts of 0, and a smiley face icon. At the bottom right is a 'Create merge request' button. The URL in the address bar is 'Donghwan Shin / TestProject / Issues / #1'.

All your key activities/contributions must be logged in GitLab

The screenshot shows the left sidebar with 'Operate', 'Monitor', 'Analyze', and 'Settings' options. The main area displays a feed of activity items. One item is highlighted with a red box and labeled 'Activity'.

The screenshot shows a detailed view of an activity item. It lists four actions taken by 'Donghwan Shin': assigning to '@ac1dsx', adding a 'deployment' label, changing the milestone to '%Project delivery', and changing the due date to January 31, 2025. The entire activity section is highlighted with a red box. The URL in the address bar is 'https://gitlab.com/DonghwanShin/TestProject/-/issues/1'.

# GitLab Exercise

---

1. Go to your team project repository in GitLab.
2. Go to Manage > Labels, and create “ToDo”, “Ongoing”, and “Meeting Notes”.  
Only one team member needs to do this; no need to repeat.
3. Go to Plan > Issues, and create an Issue (and try Assignee, Labels, Dates).  
You can create as many as you want.
4. Go to Plan > Issue boards, and click “New list” to create Todo and Ongoing lists.  
Only one team member needs to do this; no need to repeat.
5. Try drag & drop issues between lists, and open & edit issues in the board.
6. Remove the test issues just created to make a clean start later.

# Live Demo

The screenshot shows a software interface with a sidebar on the left and a main content area on the right.

**Left Sidebar:**

- Avatar icon (orange heart)
- Search bar: Search or go to... (with a placeholder 'I')
- Section: Your work
- Home (selected, highlighted in purple)
- Projects
- Groups
- Issues (with a small '1' icon)
- Merge requests
- To-Do List
- Milestones
- Snippets
- Activity

**Main Content Area:**

Your work / Home

Today's highlights

# Hi, Donghwan

Merge requests

0	Waiting for your review Just now
0	Assigned to you Just now

Issues

1	Assigned to you 11 months ago
4	Authored by you 2 days ago

Items that need your attention

Good job! All your to-do items are done.

All to-do items

# Burndown Chart Examples

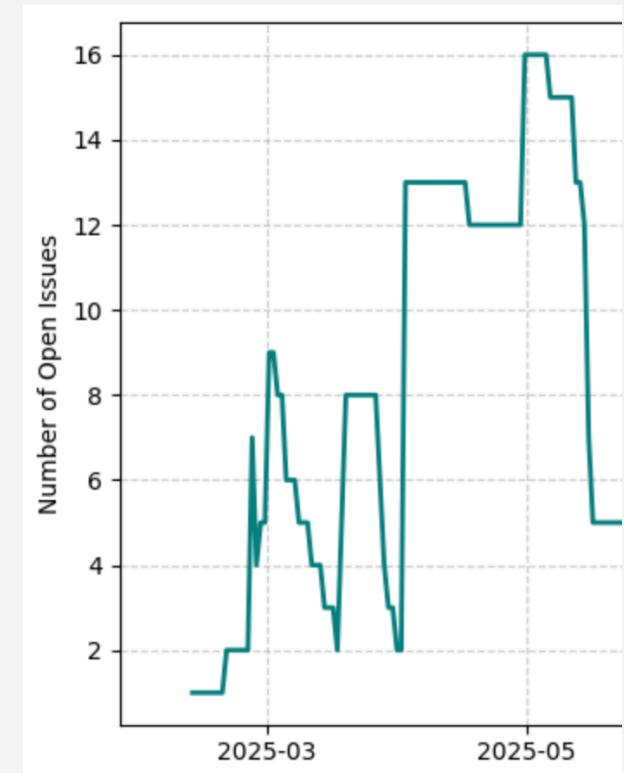

---

Good

Fine

Bad

# Team Facilitators

---

Each team will be allocated a ***facilitator*** (a member of the school's staff).

During the weekly scrum meetings, your team facilitator will conduct a quick check-in on progress.

Note: the facilitator will *not* provide technical feedback.

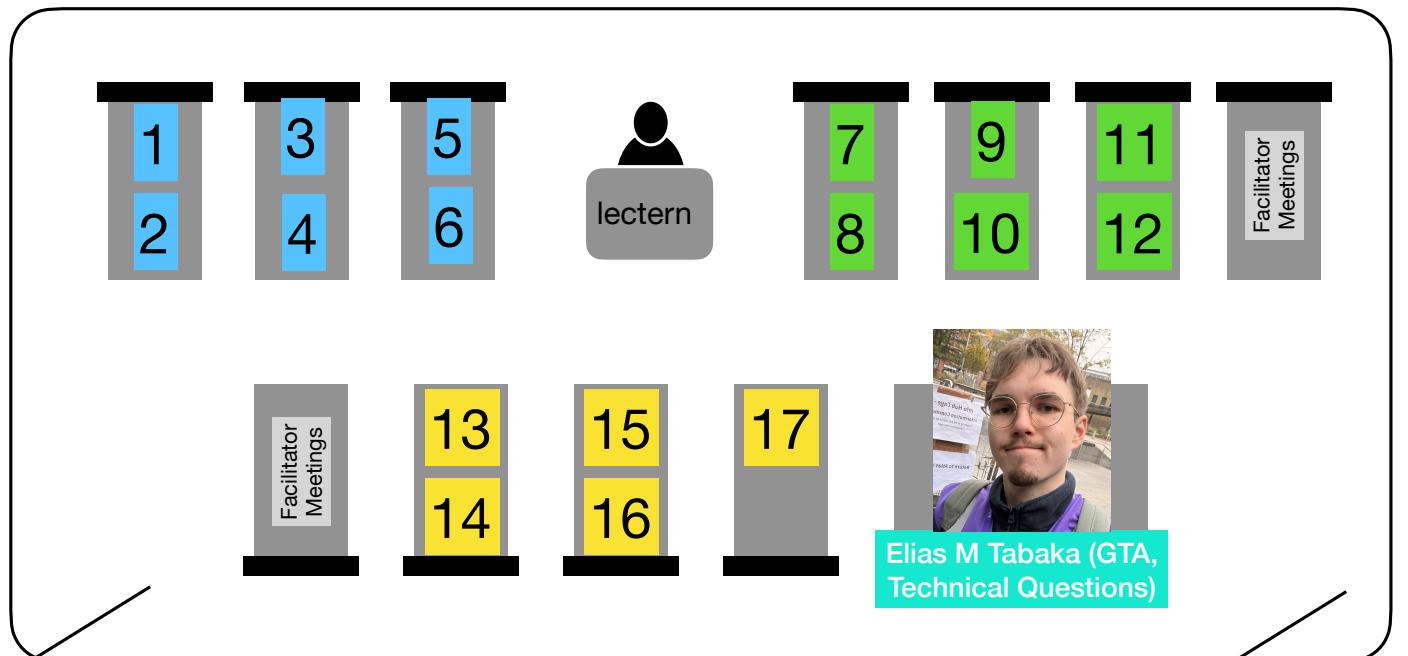

The facilitator may hold a ***one-on-one meeting*** with a member who has not made active contributions, as indicated by GitLab activity.

---

# Assessment

# Assessment Subjects

---

1. **Formative Assessment** (0% of the semester mark)
  1. Deadline: Friday 20 March 2026, 3pm
  2. Deliverables: Report (interim)
2. **Summative Assessment** (100% of the semester mark)
  1. Deadline: Friday 15 May 2026, 3pm
  2. Deliverables: Report, Demo video
3. **Peer Assessment** (BuddyCheck for individual scaling)
  1. Deadline: Friday 22 May 2026, 3pm
  2. Deliverable: BuddyCheck scores (link will appear on Blackboard)

## Important notes

- All deliverables must be submitted via Blackboard.
- While the GitLab repository (<https://git.shefcompsci.org.uk>) itself does not need to be submitted, all activities within the repository—including commit history, issues, and other contributions—will be reviewed and assessed.

# Assessment Criteria

---

Category (Mapping to UG Generic Marking Criteria)	1st (70-100%)	2:1 (60-69%)	2:2 (50-59%)	3rd / Pass (40-49%)	Fail (30-39%)	Fail (0-29%)
Implementation (Practical Skills)	Exceptional mastery; all core stories complete + extra value. Polished, autonomous performance.	Highly developed; all core stories complete. Autonomous and proficient.	Most stories completed. Tasks completed accurately.	Demonstrated developing skills; reasonable stories completed. Some functions are broken.	Limited understanding; several stories completed. Frequent errors.	Lacks evidence of skill development. Frequent errors.
Testing (Creative Thinking)	Sophisticated testing; 95%+ coverage. Critically analyse findings and improve test effectiveness.	Consistent and accurate; 70-89% coverage. Evaluates different test levels.	Good attempts; 50-69% coverage. Describes findings with evaluation.	Basic attempt; <50% coverage. Lists results without evaluation.	Some relevant info, but minimal attempt.	Little or no test; limited creative thinking evidence.
Code Quality (Critical Thinking)	Original insight; well-written code with no issues. Innovative solutions.	Substantiated; issues in ~25% of code. Synthesises ideas for conclusions.	Straightforward; issues in ~50% of code. Connects ideas logically.	Basic arguments; issues in ~75% of code. Simple, taught solutions.	Simple arguments; limited coherence. Impractical or descriptive solutions.	No problem-solving or creativity.
Refactoring (Reflection)	Critically analyses; several refactoring techniques applied. Justifies future growth actions.	Evaluates options in various places. Connects experiences to knowledge.	Describes options; basic attempts. Links to prior learning.	Superficial links; basic attempts. Acknowledges some effort.	Describes experiences without analysis. Identifies basic, unspecific ideas.	No analysis or learning is evident. No questioning or future planning.
Deployment (Practical Skills)	Comprehensive instructions; innovation in precision. Clear example commands included.	Complete but not comprehensive. Performed effectively.	Straightforward; includes instructions for installation and use.	Basic instructions or minimal info. Needs guidance to deploy.	Requires substantial guidance. Instructions are missing or inaccurate.	Fails to provide a deployable system. No or empty README.
Report (Communication)	Precise structure; wide range of strategies. Seamless source integration.	Logical and clear; accurate technical language. Good summarisation.	Basic, mostly clear; uses accessibility. Some language errors.	Inconsistent; unpolished style. Limited use of accessibility.	Unclear or fragmented structure. Minimal use of technical language.	No clear structure or logic. Does not use accessibility features.
Demonstration (Communication)	Fluent; highly adapted for audience. Precise technical argumentation.	High-value stories demonstrated, logical. Accurate use of language.	Several stories demonstrated; mostly clear. Attempts to summarise.	Fragmented; some value-adding stories demonstrated. Limited technical language.	Limited awareness of the audience. Relies heavily on direct quotation.	Inappropriate style for the audience. Source material miscommunicated.

# Peer Assessment (BuddyCheck)

---

Rate yourself and your team members on the following criteria:

- **Attendance** and **punctuality** (to team meetings, etc.).
- Ability to **work effectively with other team members**.
- **Quality** of contributions.
- **Timeliness** of contributions.

*Your Individual Mark = Your Team Mark × Your Scaling Factor*

- For example, if your team mark is 60 and your scaling factor is 0.9, your mark will be 54.
- The scaling factor is your average score over the team's average score (see [more details](#)).
- It can be further adjusted upon clear evidence (e.g., zero activities in GitLab).

# Team Operating Agreement (TOA)

---

Each team must have a ***signed*** team operating agreement (TOA).

- Use this [template](#) (TUOS login required) if your team has not created one.
- It is a ***living document*** and should be updated as needed throughout the project.
- It will set out ground rules for working as a team and serve as an essential baseline in resolving disagreements and conflicts, if any.
- It must be signed by all team members and submitted as an appendix to the ***report***.

# Conflict Management Scheme

---

## **Step 1: Within team**

Use the signed TOA to resolve any conflicts as much as possible.

## **Step 2: With your facilitator**

Discuss outstanding conflicts with the supervisor and ask for their guidance.

## **Step 3: With the project academic lead (Donghwan)**

Discuss outstanding conflicts with the project lead if the facilitator advises.

# Week 1: Initialisation (3 pm Today)

---

1. Complete your “Team Operating Agreement (TOA)” and push it to your team repository.
2. Carefully review the [Spring Project Brief](#) and discuss the following:
  - What should we do for each sprint?
  - What should we do for each Scrum meeting?
3. Create issues together (user stories based on the model solution, other tasks, etc.)
  - Make each issue self-contained but concise.
  - Always write the issue you would want to pick up if assigned.
4. Plan the first sprint.
